ABSTRACT: In this thesis, opinions are expressed about the emergence of the concept of information, its use as a term in dictionaries, and the development of meaning.

KEYWORDS: News, information, term, concept, dictionary, concept, understanding, transmission, processing.

INTRODUCTION

Information and communication technologies (ICT) are entering all areas of human society. The role of modern information technologies in solving management issues is extremely important. The main resource of the field of informatics is information. Information provides news and information about the entire existence in the world, the events and processes occurring in it. Information is available in human speech, text in books, artist's images, etc. The diversity of information sources and consumers leads to different forms of information.

The concept of information and communication technologies appeared in the national economy in the last decade of the 20th century in the process of the emergence of informatics.

In the course of its development, mankind paid attention to the creation of work tools that make its work easier and more efficient. There is an opinion that between the appearance of the first tools of labor and the first efforts to exchange information, humanity has traveled a million-year path. The appearance of writing can be included in the emergence of the simplest information technologies. These are pictures and symbols on rocks and bark, papyrus. The printing of the book, which opened the age of paper information technologies, which allows copying of information and still occupies a large place today, was a powerful impetus to the development of information and communication technologies. As in all fields, progress and change in information technology is also reflected in language. Linguists have important tasks such as organizing terms related to the field and finding alternatives to new terms introduced from a foreign language.

In this article, we tried to explain the term "information", which is one of the main concepts in the field of information technology. The term information is defined in the etymological dictionary of the Uzbek language as follows: information is the plural form of the Arabic word xabar (q) from the word axbor(un) (ATG, 40) –at (un) is an abstract noun formed with the suffix (UAYa, 500), meaning such as 'messages', 'information' (O'TIL, I 64). This word was included in the dictionary of the Uzbek language in the form of information from the dictionary of the Tajik language (TjRS, 36), although the word axbor itself is the plural form of the word xabar, and it is added -at(un) does not add a plural suffix. The word "Axbor" is not used independently in modern Uzbek.

News in the explanatory dictionary of the Uzbek language [a. plural of "message"] kam koll. message; messages; Meanings such as information are given. All the gold and silver buried in the earth has come to the surface, so let him know and study Hamza.

Information 1 is a message, information that provides insight into work, events. The chairmen of the parliamentary committees who spoke at the meeting gave information. From the newspaper. 2 The name of a special information program in radio broadcasts and television programs. Concerts, movies, "news", spotr-u weather forecast. S. Nuronov, Narvon.

3 The name of some collections that come out from time to time. Information of the Academy of Sciences.

In the encyclopedic dictionary of the Uzbek language: axbor, (ar), sacred narratives of the Shiites, Muhammad and the Shiite imam. A collection of narrations about Ali's words and activities. In Sunnis, they are recognized as hadiths and are considered a sacred source after the Qur'an. Axbor recognizes only prophets and their family members, Ali and his descendants as imams. It has been proven that most of the news are narratives that have no historical basis.

Information, 1) a set of information about events (see also Information). 2) Negotiations between states, international agreements, etc. official notice. 3) The name of some periodical publications (for example, information of the FA of the Uzbekistan SSR).

Information - (eng- information Russian-информация) 1. Facts that are included in the information processing system or are considered as its result when presented in different forms in different carriers and are used (necessary) to optimize decisions made in the process of the management object of this subject area , information about events, processes and events.

2. Information about persons, objects, facts, events, events and processes, regardless of the form of presentation.

CONCLUSION

In conclusion, it can be said that the concept of information appeared several thousand years ago. In earlier times, the function of information exchange was performed not by technical means, but by paper as a different product and the main tool. In all dictionaries, in the interpretation of the term, its themes such as message and information are the leading ones, only the dictionaries differ from each other only in the way of interpretation.
