
MOBILE LEARNING: THE INNOVATIVE LEARNING METHOD OF THE FUTURE

Haydarova Surayyo

Associate Professor Jizzakh State Pedagogical University, Uzbekistan

Yusufov Jonibek

Student Jizzakh State Pedagogical University, Uzbekistan

ABSTRACT: This in the article the future education mobile education method , his advantages , disadvantages about word is conducted.

KEYWORDS: Mobile education , traditional education , interactive education , training programs , individual education.

INTRODUCTION

Current in the day technologies fast developed going one in the period of education the field is also new changes and innovations with rich is going Of these one is mobile education (mobile learning or m-learning). Mobile education this to teachers , students and to the students mobile devices using teaching and study enable giving method being , this through traditional in the classroom education process more flexible , more interactive and globally apply possible will be Mobile education (mobile learning or m-learning) is smartphones , tablets and another mobile devices using education get method . This is the method through students study to the materials desired in the place and desired at the time introductions , lessons own to their wishes suitable respectively learning can Mobile education not only textual data , but also video, audio, and interactive study programs through teaching also allows . That's it because of this method education flexible , comfortable and a lot in terms of interactive does

Mobile of education the most big advantages one this is desired in the place and desired at the time education get of opportunity existence . Students or students mobile devices through to information fast and comfortable access opportunity have will be , this while their education process own to their wishes suitable respectively to manage help gives

Flexibility : Mobile education to the students their individual needs and abilities suitable respectively education get enable gives Har one student own on time looking study continue seven takes , this and individual mastery level increases .

Interactivity and cooperation : Mobile devices through students only study materials learning with but not limited to virtual groups each other with communication to do , thought exchange and together projects on work opportunity have will be That's it through they are also problems in real life solution to do skills they grow

Technologies through new study Methods : Mobile education audio, video, infographics to readers and other multimedia materials through education get enable gives These materials traditional textual from textbooks different respectively to understand makes it easier and study process more interesting does

Mobile of education advantages a lot though , with him depends some there are also difficulties :

1. To technology connection : Mobile education to technology complete depends that it was because of , to the internet access opportunity limited in the regions or technological resources enough didn't happen students for this method difficulty giving birth can
2. Attention sum up difficulty : Mobile devices through education receivers most of the time another applications or social to networks distracted , attention in summation to the difficulty face coming can And this education of the process efficiency reduction can
3. Education quality issues : Har always mobile education through to be given lessons traditional in classes such as education quality to raise , and of the teacher own skills complete manifestation when it comes difficulties gives birth That's it therefore , education quality of teachers qualification and present to be done materials to quality depends will be

Very at speed developing technology century all in the fields that it was such as education every field always serious the news by entering to go must will be Therefore , in the future mobile of education more development and wider spreading is expected . Virtual reality (VR), artificial intelligence (AI), and network games such as technologies mobile of education new appearances to create help gives Also education individual education in the process programs to create big attention focus can

That's it in place education process to individualization stopping passable if : Education The process is individual each one of the student needs , abilities , interests and study style account received without education process adaptation process . In this approach Individual teaching of students plans have they are for suitable study material and strategies is selected .

Summary by doing in other words , mobile education not only education get process facilitates , but on a global scale new study opportunities by creating gives But technological development with together , mobile of education efficiency increase for traditional and inn ovation methods combine important
