ABSTRACT: One of the regulations managing the universe is the law of request and turmoil. By planning a bunch of inquiries regarding request in the universe and concentrating on their responses, we can grasp one of the universe's regulations and advantage from it in our lives. For this reason, we need to respond to questions, for example, when take a gander at the sky, do we see request or confusion? What's more, are the stars organized all together or issue? When we take a gander at the woodland, do we see request or turmoil? Is it consistent with say that the sky, woodlands, and other regular peculiarities comprise of both request and confusion? To respond to these inquiries, it ought to be made sense of that any peculiarity in the material world resembles a coin with two countenances: one face "Truth of Presence" and the other face "Reality of Presence."

KEYWORDS: Request and confusion regulation, Universe, Truth of presence, Reality of presence, Halqeh otherworldliness.

INTRODUCTION

One of the regulations managing the universe is the law of request and turmoil. By planning a bunch of inquiries regarding request in the universe and concentrating on their responses, we can figure out one of the universe's regulations and advantage from it in our lives. For this reason, we need to respond to questions, for example, When take a gander at the sky, do we see request or turmoil? Are the stars organized all together or problem? When we take a gander at the woodland, do we see request or turmoil? Is it consistent with say that the sky, woods, and other normal peculiarities comprise of both request and confusion? To respond to these inquiries, it ought to be made sense of that any peculiarity in the material world resembles a coin with two countenances: One face "Truth of Presence" and the other face "Reality of Presence."

Truth of Presence

Existential truth of each and every constituent of the universe demonstrates that it exists; it has occurred, occurred or happened whether we know the reason and howness of its Existential truth of each and every constituent of the universe shows that it exists; it has occurred, occurred or

happened whether we know the reason and howness [and quality] of its event. Truth of presence either is noticeable, recordable and quantifiable, or applies an impact on the climate. It might likewise show a mix of these qualities. For instance, a piece of stone is genuine whether we know how it has been made, on the grounds that it has clearly come to presence. A few peculiarities have reality despite the fact that we can't see them with our five detects. For example, we can't see or contact infrared light, in any case it has reality, and we can find it with the guide of a few gear, measure and even use it.

The nature of presence The existential truth looks at the howness and nature of presence of a reality comparable to a base point and examines it intently. For instance, having a base point, we can research whether a given reality genuinely exists [in the outside world] or it is a deception. For example, the reflection of an item in the mirror has no existential truth on the grounds that the picture is virtual corresponding to the article. Nonetheless, the picture has existential reality [because it has appeared through the mirror. Subsequently, it is feasible for a substance in the universe to have an existential reality and simultaneously not have an existential truth contrasted with its starting point. Furthermore, the other way around, a substance probably won't have a reality for us, yet it can have existential truth, as does infrared light that isn't viewed as genuinely through unaided eyes. In any case, since it tends to be perceptible by means of exceptional gear it is at this point not stunning all in all, in light of the identification hardware that is our exposed or non-unaided eyes we can say regardless of whether something has existential truth. Another model is the air encompassing every person. As it isn't apparent to the unaided eyes, for a long time being genuine and as a matter of fact a superstition was viewed as not. Anyway today that the emanation is at last apparent through Kirlian photography, nobody can say that it needs truth. Thus, existential bits of insight assist us with investigating the obscure, understand their world, and not consider them incredible any longer.

Utilization of the Request and Turmoil Regulation

Since the universe depends on both Request and Turmoil, it is said that Request and Confusion is one of the regulations overseeing the universe. By understanding this regulation one can address his/her perspective on the foundation of request throughout everyday life, and thus forestall the harms that are handily dispensed with along these lines. Take the instance of a piece of string dangling from one's pocket, or an individual's jacket neckline not flawlessly tucked, or a photo placement or a clock balanced shifted on the mass of the holding up corridor. What number of individuals, being presented to such cases, feel anxious and choose to fix this problem or even get very apprehensive on the off chance that it is preposterous to expect to address it? What is the real connection between a person's psychical or sensory system capability and an image skewed on the wall? How could it be that the imperfections in our environmental elements cause us stress and ailments eventually?

Our surmised plans are a round of our brain. Our brains have become acclimated to the systems imagined without anyone else, and thus, assuming something is outside such structure it brings us inconvenience and pressure. Besides, the more we plan our encompassing in light of this psychological example, the more excruciating it becomes to adapt to the smallest problem. Take the case of a sumptuous house in which each household item is efficient. In the event of the smallest hint of messiness we understand it immediately, and we experience fit for a couple of moments which compromises our tranquility. On the other hand, in a bungalow house that isn't planned on hand, jumbling doesn't resentful us or make any strain. Thus, notwithstanding its scattering, we can serenely rest in it. In a rustic house there is no indication of deliberateness, evenness or precise tones and so forth. Be that as it may, in a metropolitan house everything is in a structure of organization, balance, harmony of varieties, etc, and the smallest wreck in the set quickly draws in the psyche and squanders its energy. For example, assuming that the walls, surfaces or entryways are marginally malshaped, the psyche centers around it in torture. Though, on account of a country house which is planned in view of [unsystematic] scattering, even the twisted walls, entryways, steps, and rooftops are scarcely observable and they don't squander one's psychological energy. That is the reason; just in a rural mood might the people at any point really appreciate mental unwinding and set themselves liberated from the request stricken strains of machine life.

The Connection among Request and Confusion Regulation and Unusual Ways of behaving

On occasion, we witness occurrences in the general public that supporting the inspirations driving them appears to be troublesome. Take for example: harming pay phones, transport seats, train windows, and such. Proof shows that the people who do such activities enjoy doing as such. They seldom appear to stop such way of behaving and could try and save this propensity for a lifetime. Also, there are people from well off and decent families who - with practically no monetary requirements - over and over commit robbery. A modest bunch of examinations exist with respect to such strange ways of behaving. Clinicians, sociologists, and others each attempt to focus on the heart of the matter their own specific manner. A child's reality is as per the universe's structures and is customized in view of the law of Request and Turmoil. For instance, a youngster who profoundly tries to have a toy and afterward at last helps hold of it through incredible perseverance. He plays with it for some time and doesn't permit any other individual to try and contact it. In any case, sooner or later he begins to separate it into pieces deliberately. As a matter of fact, a child's mindset is in concordance to [the standards of] 'Development and Deconstruction', and 'Request and Turmoil'. In any case, most guardians, only for their own straightforwardness, want their youngsters to just use one single portion of their current programming-based program and to simply apply 'request' in all parts of their lives. The world-survey programming of the two guardians and educators are set up in light of request and rationale; subsequently, they demand that their children act moreover and in view of a similar world-review framework from infanthood. Thusly, they recommend proportion, request and rationale to their children. Later on, they even gloat about their actual reasonable and flawless youngsters.

At the point when such people see a spotless and very much arranged pay phone, they unwittingly and coincidentally attempt to indulge its structure by harming it, and they appreciate doing as such. Whatever represents request [or pattern] unwittingly disturbs them and powers them to damagingly act. For example, the moving of a train that is an image of efficiency upsets them in a roundabout way, and they would go into delights on the off chance that they could some way or another break this request even by tossing a stone at the moving train. Thus, they do as such, and it gives them outright joy without knowing why. By and large, subsequent to forcing rationale and request on kids, an 'request stricken' and 'rationale stricken' entanglement is molded in their subliminal because of which they unconsciously challenge precision and whatever represents it. In additional created social orders that implement more discipline, we witness more serious occurrences and troublesome ways of behaving when the request stricken and rationale stricken stage uncovered itself. For example, in the West sometimes we hear the insight about an equipped young person entering a school and starting to shoot at the school kids. In certain individuals, the uprising against request is shown through a switched system, i.e., they act inverse and in opposition to everything they are said. In extremely huge families where people are participated in a sort of fascisms, such disobedience is uncovered in an alternate way. One more sort of resistance to request and rationale is the sexual direction reaction wherein the individual scowls at reason, rationale and request, and unwittingly responds against ordinary sexual direction. The person's inward programming is customized in view of fascination with the other gender; notwithstanding, because of this defiance it is changed to appreciation for a similar sex. For the explanation that this goes against part of the rationale that oversees human way of behaving, it unknowingly fulfills the individual and they will appreciate such inclination. The more man is constrained into rationale and request, the more will gay inclinations and so forth increment. This is one of the ongoing issues of the world, and the more people move towards machine life and outright request and rationale, the more will they face such issues.

Essentially, some could spruce up their young man as a young lady only for entertainment purposes, and put on compensate for him or request that he carry on like young ladies or guardians, who wished to have a little girl, could pick a young lady's name for their child and deal with him like a young lady [these models change from culture to culture]. Sooner or later the youngster's oblivious programming is probably going to be persuaded that he is a young lady. In this manner, in youthfulness, he could show fascination with his own sex, a propensity that others consider as a gay tendency, however he, at the end of the day, sees as typical. In the two cases, the main variable that is the entry of wrong projects into the singular's oblivious programming has caused such circumstances. In this manner, the individual is a product based casualty. As examined, the subsequent component is likewise a significant reason for homosexuality in which the individual is again viewed as a casualty. With a more intensive glance at the above clarification, it very well may be expressed that up until this point the individuals' ignorance of the regulations and standards of the universe has caused him more harm than envisioned. For example, the harms brought about by dismissing the Request and Turmoil regulation (that incorporate different sorts

of defiance - a couple of which were referenced above - , and even perversion, masochism, and such) grow step by step. Going against the norm, perceiving the utilization of such regulations and their actual spot will bring the individual a better life.

Erroneous Perspective AND MENTOSOMATIC Sicknesses

Perspective means the individual's general comprehension of himself, the climate and every one of the occasions happening around him. All that the individual understands from life encounters and occasions is gone through the worldviewing programming system called the World-survey Channel which is the general aftereffect of mental and psychical handling, and unwittingly characterizes his responses to occasions. This system is a channel and sub-plan situated at the semi-hesitant level. Microorganisms, defilement, advanced age, mishaps, natural contamination and toxic substances, lack of healthy sustenance, nonappearance of body development, inverse and two-timing ways of behaving or psychosomatic illnesses, inborn infections and deformities are in good company the reasons for sicknesses. Furthermore, 'inaccurate perspective' is one of the reasons for human sicknesses called mentosomatic illnesses [mental (brain) and soma (body)] or perspective established infections. Furthermore, can be very risky to human wellbeing and even lead to physical ailments. One of these wrong perspectives is the absence of information, understanding and view of the law of Request and Confusion. To forestall such illnesses we need to adjust our perspectives by becoming outfitted with right ones.
